**1 Spatial augmented reality: Modern approaches to augmented reality**

 Oliver Bimber, Ramesh Raskar  
 July 2006 **ACM SIGGRAPH 2006 Courses SIGGRAPH '06**  
**Publisher:** ACM Press  
 Full text available:  pdf(2.45 MB) Additional Information: [full citation](#), [abstract](#), [references](#)

This tutorial discusses the Spatial Augmented Reality (SAR) concept, its advantages and limitations. It will present examples of state-of-the-art display configurations, appropriate real-time rendering techniques, details about hardware and software implementations, and current areas of application. Specifically, it will describe techniques for optical combination using single/multiple spatially aligned mirror-beam splitters, image sources, transparent screens and optical holograms. Furthermore, ...

**2 Facial modeling and animation**

 Jörg Haber, Demetri Terzopoulos  
 August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**  
**Publisher:** ACM Press  
 Full text available:  pdf(18.15 MB) Additional Information: [full citation](#), [abstract](#)

In this course we present an overview of the concepts and current techniques in facial modeling and animation. We introduce this research area by its history and applications. As a necessary prerequisite for facial modeling, data acquisition is discussed in detail. We describe basic concepts of facial animation and present different approaches including parametric models, performance-, physics-, and learning-based methods. State-of-the-art techniques such as muscle-based facial animation, mass-s ...

**4 Computational photography: Non-photorealistic camera: depth edge detection and stylized rendering using multi-flash imaging**

 Ramesh Raskar, Rogerio Feris, Jingyi Yu, Matthew Turk  
July 2006 **ACM SIGGRAPH 2006 Courses SIGGRAPH '06**

Publisher: ACM Press

Full text available:  pdf(288.75 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

We present a non-photorealistic rendering approach to capture and convey shape features of real-world scenes. We use a camera with multiple flashes that are strategically positioned to cast shadows along depth discontinuities in the scene. The projective-geometric relationship of the camera-flash setup is then exploited to detect depth discontinuities and distinguish them from intensity edges due to material discontinuities. We introduce depiction methods that utilize the detected edge features t ...

Publisher: ACM Press

Full text available:  pdf(868.61 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

Working high above the floor of the Sistine Chapel in the Vatican of Rome, between 1509 and 1512 Michelangelo Buonarroti painted some of the finest pictorial images of all time. On the ceiling of the papal chapel, he created a masterpiece fresco that includes nine scenes from the book of Genesis. Among them is the famous *Creation of Adam* scene--- showing God touching Adam's hand. In 1510, an initial study led Michelangelo to draw the Adam figure as a sanguine on a piece of paper. To ...

**8 Interactive local adjustment of tonal values** 

 Dani Lischinski, Zeev Farbman, Matt Uyttendaele, Richard Szeliski  
July 2006 **ACM Transactions on Graphics (TOG) , ACM SIGGRAPH 2006 Papers SIGGRAPH '06**, Volume 25 Issue 3

Publisher: ACM Press

Full text available:  pdf(634.14 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)  
 mov(22:25 MIN)

This paper presents a new interactive tool for making local adjustments of tonal values and other visual parameters in an image. Rather than carefully selecting regions or hand-painting layer masks, the user quickly indicates regions of interest by drawing a few simple brush strokes and then uses sliders to adjust the brightness, contrast, and other parameters in these regions. The effects of the user's sparse set of constraints are interpolated to the entire image using an edge-preserving energ ...

**Keywords:** digital darkroom, high dynamic range imaging, image editing, stroke-based interface, tonal adjustment, tone mapping

#### 9 Computational strategies for object recognition

 Paul Suetens, Pascal Fua, Andrew J. Hanson  
March 1992 **ACM Computing Surveys (CSUR)**, Volume 24 Issue 1

**Publisher:** ACM Press

Full text available:  pdf(6.37 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

This article reviews the available methods for automated identification of objects in digital images. The techniques are classified into groups according to the nature of the computational strategy used. Four classes are proposed: (1) the simplest strategies, which work on data appropriate for feature vector classification, (2) methods that match models to symbolic data structures for situations involving reliable data and complex models, (3) approaches that fit models to the photometry and ...

**Keywords:** image understanding, model-based vision, object recognition

#### 10 The elements of nature: interactive and realistic techniques

 Oliver Deussen, David S. Ebert, Ron Fedkiw, F. Kenton Musgrave, Przemyslaw Prusinkiewicz, Doug Roble, Jos Stam, Jerry Tessendorf  
August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**

**Publisher:** ACM Press

Full text available:  pdf(17.65 MB) Additional Information: [full citation](#), [abstract](#)

This updated course on simulating natural phenomena will cover the latest research and production techniques for simulating most of the elements of nature. The presenters will provide movie production, interactive simulation, and research perspectives on the difficult task of photorealistic modeling, rendering, and animation of natural phenomena. The course offers a nice balance of the latest interactive graphics hardware-based simulation techniques and the latest physics-based simulation techni ...

#### 11 High resolution virtual reality

 Michael Deering

#### 12 Point-based computer graphics

 Marc Alexa, Markus Gross, Mark Pauly, Hanspeter Pfister, Marc Stamminger, Matthias Zwicker  
August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**

**Publisher:** ACM Press

Full text available:  pdf(8.94 MB) Additional Information: [full citation](#), [abstract](#), [citations](#)

This course introduces points as a powerful and versatile graphics primitive. Speakers

present their latest concepts for the acquisition, representation, modeling, processing, and rendering of point sampled geometry along with applications and research directions. We describe algorithms and discuss current problems and limitations, covering important aspects of point based graphics.

### **13 GPGPU: general purpose computation on graphics hardware**

 David Luebke, Mark Harris, Jens Krüger, Tim Purcell, Naga Govindaraju, Ian Buck, Cliff Woolley, Aaron Lefohn

August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**

**Publisher:** ACM Press

Full text available:  pdf(63.03 MB) Additional Information: [full citation](#), [abstract](#), [citations](#)

The graphics processor (GPU) on today's commodity video cards has evolved into an extremely powerful and flexible processor. The latest graphics architectures provide tremendous memory bandwidth and computational horsepower, with fully programmable vertex and pixel processing units that support vector operations up to full IEEE floating point precision. High level languages have emerged for graphics hardware, making this computational power accessible. Architecturally, GPUs are highly parallel s ...

### **14 Look: MultiView: spatially faithful group video conferencing**

 David Nguyen, John Canny

April 2005 **Proceedings of the SIGCHI conference on Human factors in computing systems CHI '05**

**Publisher:** ACM Press

Full text available:  pdf(1.89 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

MultiView is a new video conferencing system that supports collaboration between remote groups of people. MultiView accomplishes this by being *spatially faithful*. As a result, MultiView preserves a myriad of nonverbal cues, including gaze and gesture, in a way that should improve communication. Previous systems fail to support many of these cues because a single camera perspective warps spatial characteristics in group-to-group meetings. In this paper, we present a formal defini ...

**Keywords:** deixis, eye contact, gaze, spatial faithfulness, video conferencing

### **15 High dynamic range imaging**

Current display devices can display only a limited range of contrast and colors, which is one of the main reasons that most image acquisition, processing, and display techniques use no more than eight bits per color channel. This course outlines recent advances in high-dynamic-range imaging, from capture to display, that remove this restriction, thereby enabling images to represent the color gamut and dynamic range of the original scene rather than the limited subspace imposed by current monitor ...

### **16 Perceptually-supported image editing of text and graphics**

This paper presents a novel image editing program emphasizing easy selection and manipulation of material found in informal, casual documents such as sketches, handwritten notes, whiteboard images, screen snapshots, and scanned documents. The program, called *ScanScribe*, offers four significant advances. First, it presents a new, intuitive model for maintaining image objects and groups, along with underlying logic for updating these in the course of an editing session. Second, *ScanScribe* t ...

We present an image-based modeling and editing system that takes a single photo as input. We represent a scene as a layered collection of depth images, where each pixel encodes both color and depth. Starting from an input image, we employ a suite of user-assisted techniques, based on a painting metaphor, to assign depths and extract layers. We introduce two specific editing operations. The first, a “clone brushing tool,” permits the distortion-free copying of parts of a picture, b ...

**18 Photographing long scenes with multi-viewpoint panoramas**

We present a system for producing multi-viewpoint panoramas of long, roughly planar scenes, such as the facades of buildings along a city street, from a relatively sparse set of photographs captured with a handheld still camera that is moved along the scene. Our work is a significant departure from previous methods for creating multi-viewpoint panoramas, which composite thin vertical strips from a video sequence captured by a translating video camera, in that the resulting panoramas are composed ...

Full text available:  pdf(3.35 MB)

Additional Information: [full citation](#), [abstract](#)

"An Interactive Introduction to OpenGL Programming" provides an overview of the OpenGL Application Programming Interface (API), a library of subroutines for drawing three-dimensional objects and images on a computer. After the completion of the course, a programmer able to write simple programs in the "C" language will be able to create an OpenGL application that has moving 3D objects that look like they are being lit by lights in the scene and by specifying colors or images that should be used ...
